

JOEHAN ANTONY FERNANDO J

 joehanantony@gmail.com  +91 8754442312  Chennai Tamil Nadu

Personal Summary

Final-year Computer Science Engineering student with hands-on SOC experience and a strong interest in cybersecurity, AI, and emerging technologies. Driven by curiosity and a problem-solving mindset, with an interest in building AI agents, implementing and deploying practical solutions, and continuously learning through experimentation. Currently developing skills in penetration testing and exploring AI security, with a long-term focus on applying AI and AGI to solve real-world problems.

Education

B.E., Computer Science and Engineering
Sathyabama Institute of Science And Technology
GPA: 8

Secondary Education
Velammal Matriculation Higher Secondary School
GPA: 85 %

Primary Education
Velammal Matriculation Higher Secondary School
GPA: 75 %

Skills

Security Operations:
Splunk, Wireshark, MITRE ATT&CK, ISO 27001-aligned processes, SIEM workflows, Red/Blue/Purple Team methodology

Blockchain / Web3
On-chain transaction analysis, testnet validation & bug reporting, DeFi risk assessment

Engineering
Python, SQL, Java, Kotlin, PostgreSQL (Row-Level Security), Kafka, Docker, REST APIs

AI & Agentic Development
AI agents, agentic workflows, LLM integration, AI-assisted automation, API orchestration, solution prototyping and deployment

Application & Offensive Security
OWASP Top 10, penetration testing (learning), network security fundamentals, threat modeling

Internship Experience

QA Intern
Cognizant Technology Solutions

- Completed Cognizant GenC training in Java and Selenium automation.
- Gained practical experience in software testing and QA automation.
- Applied agentic AI development to design and build a QA automation tool alongside the training.

04/2026 – 07/2026
Chennai, India

Cybersecurity Intern
Hinduja Global Solutions Pvt. Ltd.

- Supported SOC operations by analyzing threats and phishing attacks.
- Worked with ISO 27001, Splunk, Wireshark, and MITRE ATT&CK.
- Gained practical knowledge of networking and SIEM workflows.
- Applied Red/Blue/Purple Team concepts in SOC operations.

Bangalore, India

Projects

Subscription Management System
Developed an automated system using Python (Aiogram) and SQLite, integrating CryptoCloud (USDT) for seamless BNB Chain payments., Automated user onboarding via join-request links, featuring real-time expiry enforcement, webhook/polling reliability, and CSV data exports., Deployed on VPS using Nginx and systemd with failover logic to handle high-concurrency traffic and ensure 24/7 uptime.

Password Strength Analyzer
Developed a web-based tool to evaluate password security using Python (Flask), HTML, CSS, JavaScript., Implemented scoring algorithm using entropy, dictionary, and pattern analysis., Displayed dynamic strength meter with actionable feedback., Modular design for future AI and breach database integration.

Intelligent SOC triage: a language model approach for EDR alert management

Developed an LLM-powered EDR alert triage system to automate SOC-level alert analysis and prioritization., Implemented AI-based classification, severity scoring, and explainable alert summarization from CSV/JSON inputs., Generated actionable remediation recommendations to assist faster incident response., Built an interactive Streamlit dashboard for alert visualization and analyst decision support.

AdPilot — Agentic AI Ad-Generation Platform

Building an agentic AI SaaS platform that transforms prompts, URLs, and source content into platform-ready advertising content and creative assets.
Developing the platform with NestJS, Next.js, PostgreSQL, and Prisma across content generation, campaigns, and brand workflows. Implementing a bring-your-own-key architecture that enables users to connect and manage their own AI providers.

Hobbies and Interests		
• Football	• Game Console Technology	• Cryptocurrency & Blockchain Technology
